

Fall 2021 Pre-calculus Lesson 5.3

Dr. O'Brien
Lehman High School
October 20, 2021

students need calculators
no new vocab

Dr. O'Brien, 10/20/21

do now

be sure to: Get out your binder. Copy goal and answer do now questions below. Show all work or write a complete sentence for each answer.

1. What's the parent function for $f(x)$?
2. How's $f(x)$ being transformed from its parent function?
3. Write an equation for $f(x)$.

class: pre-calculus goal: HDW find the x-intercepts for quadratic equations

1. The basic quadratic is x^2 .
 2. It's being shifted 1 right and 2 down.
 3. $f(x) = (x - 1)^2 - 2$
- This is the standard form for a quadratic equation.

Dr. O'Brien, 10/20/21

framing

- **what:** find x-intercepts for quadratic equations
- **why:** This skill helps us to sketch quadratics. Quadratic equations can be used to model things in science, engineering, and more!
- **where to:** Use quadratic functions to solve real world problems

class: pre-calculus goal: HDW find the x-intercepts for quadratic equations

the plan: We'll go through one of the Pset #5 word problems together.
You'll work with a partner to solve some other word problems

Dr. O'Brien, 10/20/21

Vocabulary

- **Vertex:** Minimum or maximum point of a quadratic function
- **Parabola:** The curve formed by the graph for a quadratic function.

class: pre-calculus goal: HDW find the x-intercepts for quadratic equations

Dr. O'Brien, 10/20/21

warm up

1. Rewrite $h(x) = x^2 - 2x + 1$ in standard form.

2. Sketch a graph for the equation, identifying the vertex.

class: pre-calculus goal: HDW find the x-intercepts for quadratic equations

$$(x^2 - 2x - 1) + 1 + 1$$

$$(x - 1)^2 + 2$$

$$\text{vertex} = (1, 2)$$

2. sketch an upward facing quadratic with vertex at (1,2). w

Dr. O'Brien, 10/20/21

How could we make our graph more precise?

$$h(x) = x^2 - 2x + 1$$

Find the x-intercepts!

class: pre-calculus goal: HDW find the x-intercepts for quadratic equations

+find the x-ints!

+How do we do that? by factoring

You want to find a pair of numbers that multiply to positive 1 and add to -2 so that's going to be -1

$$(x-1)(x-1) = (x-1)^2$$

Dr. O'Brien, 10/20/21

How do we graph this?

$$g(x) = x^2 - 4x + 3$$

Find the ~~x-intercepts~~ term

class: pre-calculus goal: HDW find the x-intercepts for quadratic equations

+ hdw find the vertex? convert to standard form? try on own, followed by turn & talk.

$$(x^2 - 4x + 4) - 4 + 3$$
$$(x - 2)^2 - 1.$$

vertex is (2,-1). Sketch

+how do we make our sketch more precise? Let's find the the x-ints
+factor out the equation. find two numbers that multiply to +3 and add to -4
 $x^2 - 4x + 3 = 0$
 $(x - \underline{\quad})(x - \underline{\quad})$
 $(x-1)(x-3)$,

xints are 1 and 3

Dr. O'Brien, 10/20/21

Problem set

Be sure to:

- Work at a volume 0 **first 4 minutes**
- Then you can check in with a **neighbor**
- **Do work in your notebook**
- **Show all work**

class: pre-calculus goal: HDW find the x-intercepts for quadratic equations

Dr. O'Brien, 10/20/21

In Exercises 1-4 (a) find the standard form of the equation, (b) find the x-intercepts, and (c) use this information to sketch a graph:

1. $f(x) = x^2 - 6x + 8$

2. $x^2 - 2x - 15$

3. $h(x) = 4x^2 + 32x + 64$

4. $m(x) = x^2 - 4x + 20$

class: pre-calculus goal: HDW find the x-intercepts for quadratic equations

See answer key

5. For $f(x) = 2x^2$, $g(x) = x + 4$, (a) $f \circ g$, (b) $g \circ f$, and (c) try to find $(f \circ g)(0)$.

For (6) and (7) below, find two functions f and g such that $(f \circ g)(x) = h(x)$. There are many right answers, explain in a complete sentence why yours is correct:

6. $h(x) = \sqrt{x^2 - 4}$ 7. $h(x) = \frac{4}{(5x + 3)^2}$

class: pre-calculus goal: HDW find the x-intercepts for quadratic equations

+how rewrite in standard form?check notes!
How identify composite functions? Find a simpler function in the bigger one

8. The path of a football is given by

$$y = -0.08x^2 + 1.8x + 3$$

Use the *how to solve it* method and figure out how high the football gets. **Hint:** draw a graph!

See answer key
+hdw rewrite in standard form? Factor out -0.08, then it's the same strategy as normal
+hdw know this graph will be a frowns face? It's what the path of a football should look like. Also when we rewrite in standard form the coefficient is -.
+how do you tell from a sketch the highest point? It's the vertex

exit ticket

be sure to: Answer on a sheet of loose leaf paper. Show all work or write a complete sentence for each answer:

1. Rewrite $h(x) = x^2 - 2x - 12$ in **standard form**.
2. Find the x-intercepts then sketch a graph for the equation.

class: pre-calculus goal: HDW find the x-intercepts for quadratic equations

$$(x^2 - 2x - 1) + 1 + 1$$

$$(x - 1)^2 + 2$$

$$\text{vertex} = (1, 2)$$

2. sketch an upward facing quadratic with vertex at (1,2).
